Past Medical History

None recorded.

History of Present Illness

	Pain Management L-spine
Reported By:	Patient
HPI:	Location: pain is not radiating. Quality: aching. Severity: current pain level 7/10, same. Duration: constant. Onset/Timing: chronic. Aggravating Factors: standing, walking. Associated Symptoms: no weakness, no numbness, no bladder compromise, no bowel compromise. ADL (Activities of Daily Living): improve with medication, walking. Prior Imaging: no recent studies. Prior EMG: no recent EMG. Previous Surgery none
Notes:	<p>Pt reports N/V with Roxicodone. She returned the prescriptions and remaning tablets.</p>

Review of Systems

	Comprehensive General Adult ROS
Reported By:	Patient
Constitutional:	Constitutional: no fever, no night sweats, no significant weight gain, no significant weight loss, no exercise intolerance
Eyes:	Eyes: no dry eyes, no irritation, no vision change
Respiratory:	Respiratory: no cough, no wheezing, no shortness of breath, no coughing up blood, no sleep apnea
Musculoskeletal:	Musculoskeletal: no muscle weakness, no back pain, no swelling in the extremities, muscle aches, arthralgias/joint pain
Integumentary:	Skin: ; slight erythema around dorsal great toe incision
Neurologic:	Neurologic: no loss of consciousness, no weakness, no numbness, no seizures, no dizziness, no headaches
Psychiatric:	Psych: depression

Physical Exam

General Adult Exam, Pain Management Detailed Exam	
Constitutional:	General Appearance: well-nourished, well-developed. Level of Distress: mild distress. Ambulation: ambulating normally
Psychiatric:	Insight: good judgement. Mental Status: active and alert, depressed. Orientation: to time, to place, to person. Memory: recent memory normal, remote memory normal
Head:	Head: normocephalic, atraumatic
Lungs:	Respiratory effort: no dyspnea
Musculoskeletal::	Motor Strength and Tone: normal motor strength, normal tone. Joints, Bones, and Muscles: no bony abnormalities, no contractures, no malalignment, limited ROM, tenderness. Extremities: no cyanosis, no edema, no varicosities, no palpable cord. Left Shoulder: no objective synovitis, no erythema, no warmth, tenderness, pain on palpation, reduced ROM
Back:	Thoracolumbar Appearance: normal curvature
Lower Extremities:	Right Foot: no warmth, reduced ROM, swelling, erythema, pain on palpation

Reason for Visit

injection
Patient reports to the office today for sacroiliac epidural injection.

Chief Complaint

injection
Patient reports to the office today for sacroiliac epidural injection.

Instructions

1. Lumbar radiculopathy
M54.16: Radiculopathy, lumbar region
2. Low back pain
M54.5: Low back pain
- back care and preventing injuries: care instructions
 - getting back to normal after low back pain: care instructions
 - learning about relief for back pain

Discussion Note
The block will be repeated in two weeks.

Assessment

None recorded.

Date	Name	Notes
03/05/2019	Sacral Epidura	<p>PROCEDURE: Sacral Epidural Steroid Injection with Catheter Pre-Operative VAS: Pre-Operative pain level was

Date	Name	Notes
	l with Catheter	<p>reported as a {{0 1 2 3 4 5 6 7 8* 9 10}}

Indication The patient has failed conservative measures greater than 6 months of treatment including NSAIDS, Opioids, Physical Therapy/home exercise program, avoidance of provoking activities an/or cognitive behavioral therapies. The pain is moderate to severe and adversely affects ADL's. The procedure is medically necessary because all other reasonable treatments have been tried and failed to relieve pain and improve function.</p> <p>

Medications:
{{4# enter amount here}} cc of preservative-free sterile {{0.5% Marcaine normal saline Bupivacaine 0.5% Lidocaine 1% Lidocaine*}}
{{.5# enter amount here}} cc of {{Celestone Depo-Medrol Kenalog*}} {{6 10 40* 80}}mg/mL</p> <p>

Procedure Note:
Patient is aware of potential complications and wishes to proceed .Informed, signed consent was obtained. The patient was brought to the procedure room and placed in a prone position. The {{cervical thoracic lumbar caudal*}} area was prepped using three consecutive Hibiclens scrubs followed by placement of a sterile fenestrated drape. Appropriate anatomic landmarks were determined.

Under fluoroscopic guidance, a {{17-guage Tuohy# 18-guage Tuohy 22-guage tuohy 25 guage tuohy}} needle was advanced into the epidural space at the {{sacral cornu# right left unilateral}} {{C1 C2 C3 C4 C5 C6 C7 T1 T2 T3 T4 T5 T6 T7 T8 T9 10 T11 T12 L1 L2 L3 L4 L5 S1 S2}} . {{The contrast syringe was placed on the needle, and gentle aspiration revealed no evidence of cerebrospinal fluid or blood return. Contrast was injected and the typical epidural flow pattern was observed, verifying epidural placement. }} An epidural catheter was then passed through the needle into the epidural space. The catheter was positioned such that the tip was at {{C1-C2 C2-C3 C3-C4 C4-C5 C5-C6- C6-C7 C7-T1 T1-T2 T2-T3 T3-T4 T4-T5 T5-T6 T6-T7 T7-T8 T8-T9 T9-T10 T10-T11 T11-T12 T12-L1 L1-L2 L2-L3 L3-L4 L4-L5 L5-S1*}}.There was no evidence of vascular or intra-thecal injection. No paresthesias were reported by the patient. Once the catheter was properly positioned, the above noted medication solution was then injected with incremental negative aspiration every 2cc. AP and lateral x-rays were obtained and hard copies made to document final needle placement. The catheter was then withdrawn with the tip in tact. All needles were withdrawn intact as well . The injection site was cleansed with isopropyl alcohol and sterilely dressed.</p> <p>

The patient tolerated the procedure well and was taken to the recovery room. There were no complications. The patient was observed for an adequate period of time postoperatively. Discharge Instructions were given as follows: They are no to do any major activities for the next 12 hours following the procedure. They may resume all regular medications and diet following the procedure; except anticoagulants, which should be started one day following the procedure. They were advised that if they should begin to experience any symptoms of a fever; infection; bleeding; shortness of breath; or any progressive upper or lower extremity weakness following the procedure, that they should go immediately to an emergency room. The patient was discharged home after demonstrating the ability to ambulate and to tolerate oral liquids.

Post-Operative VAS:
Post-Operative pain level was reported as a {{0 1 2* 3 4 5 6 7 8 9 10}}</p></p>

Contrast was injected and the typical epidural flow pattern was observed, verifying epidural placement. }} An epidural catheter was then passed through the needle into the epidural space. The catheter was positioned such that the tip was at {{C1-C2 C2-C3 C3-C4 C4-C5 C5-C6- C6-C7 C7-T1 T1-T2 T2-T3 T3-T4 T4-T5 T5-T6 T6-T7 T7-T8 T8-T9 T9-T10 T10-T11 T11-T12 T12-L1 L1-L2 L2-L3 L3-L4 L4-L5 L5-S1*}}.There was no evidence of vascular or intra-theal injection. No paresthesias were reported by the patient. Once the catheter was properly positioned, the above noted medication solution was then injected with incremental negative aspiration every 2cc. AP and lateral x-rays were obtained and hard copies made to document final needle placement. The catheter was then withdrawn with the tip in tact. All needles were withdrawn intact as well . The injection site was cleansed with isopropyl alcohol and sterilely dressed.</p> <p>

The patient tolerated the procedure well and was taken to the recovery room. There were no complications. The patient was observed for an adequate period of time postoperatively. Discharge Instructions were given as follows: They are no to do any major activities for the next 12 hours following the procedure. They may resume all regular medications and diet following the procedure; except anticoagulants, which should be started one day following the procedure. They were advised that if they should begin to experience any symptoms of a fever; infection; bleeding; shortness of breath; or any progressive upper or lower extremity weakness following the procedure, that they should go immediately to an emergency room. The patient was discharged home after demonstrating the ability to ambulate and to tolerate oral liquids.

Post-Operative VAS:
Post-Operative pain level was reported as a {{0 1 2* 3 4 5 6 7 8 9 10}}</p> </p>

<p>PROCEDURE: Sacral Epidural Steroid Injection with Catheter

Pre-Operative VAS:
Pre-Operative pain level was reported as a {{0|1|2|3|4|5|6|7|8*|9|10}}

Indication The patient has failed conservative measures greater than 6 months of treatment including NSAIDS, Opioids, Physical Therapy/home exercise program, avoidance of provoking activities an/or cognitive behavioral therapies. The pain is moderate to severe and adversely affects ADL's. The procedure is medically necessary because all other reasonable treatments have been tried and failed to relieve pain and improve function.

Medications:
{{4#|enter amount here}} cc of preservative-free sterile {{0.5% Marcaine|normal saline|Bupivacaine| 0.5% Lidocaine| 1% Lidocaine*}}
{{.5#|enter amount here}} cc of {{Celestone|Depo-Medrol|Kenalog*}} {{6|10| 40*|80}}mg/mL

Procedure Note:
Patient is aware of potential complications and wishes to proceed .Informed, signed consent was obtained. The patient was brought to the

Reason for Visit

low back pain; Bilateral knee pain
Patient reports to the office today for her follow up visit. Patient states lower back pain and

bilateral knee pain. The pain is constant and aching depending on the day. Physical activity increases the pain. The pain medication is working well.

Chief Complaint

low back pain; Bilateral knee pain
Patient reports to the office today for her follow up visit. Patient states lower back pain and bilateral knee pain. The pain is constant and aching depending on the day. Physical activity increases the pain. The pain medication is working well.

Instructions

1. Low back pain

M54.5: Low back pain

- morphine 30 mg immediate release tablet
- morphine 30 mg immediate release tablet

2. Lumbar radiculopathy

M54.16: Radiculopathy, lumbar region

3. Lumbar facet joint pain

M54.5: Low back pain

4. Hip pain

M25.559: Pain in unspecified hip

Discussion Note

Discussed in detail and counseled patient in regards to the continued need for compliance with recommendations to improve quality of life and reduce pain.
UDT to assess physiologic levels, medication interaction potential, medication treatment interval efficacy.
Continue current regimen.
X-rays of the bilateral knees.
PDMP Reviewed.

Patient educational handouts: No information available.

History of Present Illness

	Pain Management L-spine
Reported By:	Patient
HPI:	Location: pain is not radiating. Quality: aching. Severity: improving, current pain level 3/10. Duration: constant. Onset/Timing: chronic. Aggravating Factors: standing, walking. Associated Symptoms: no weakness, no numbness, no bladder compromise, no bowel compromise. ADL (Activities of Daily Living): improve with medication, walking. Prior Imaging: no recent studies. Prior EMG: no recent EMG. Previous Surgery none
Notes:	<p>Pt reports increased bilateral knee pain. She did have a recently fall. It was not onto her knees. She has not had any imaging of her knees. </p>

Review of Systems

	Comprehensive General Adult ROS
Reported By:	Patient
Constitutional:	Constitutional: no fever, no night sweats, no significant weight gain, no significant weight loss, no exercise intolerance
Eyes:	Eyes: no dry eyes, no irritation, no vision change
Cardiovascular:	Cardiovascular: no chest pain, no arm pain on exertion, no shortness of breath when walking, no shortness of breath when lying down, no palpitations, no known heart murmur

Respiratory:	Respiratory: no cough, no wheezing, no shortness of breath, no coughing up blood, no sleep apnea
Musculoskeletal:	Musculoskeletal: no muscle weakness, no back pain, no swelling in the extremities, muscle aches, arthralgias/joint pain
Integumentary:	Skin: ; slight erythema around dorsal great toe incision
Neurologic:	Neurologic: no loss of consciousness, no weakness, no numbness, no seizures, no dizziness, no headaches
Psychiatric:	Psych: depression

Physical Exam

	General Adult Exam, Pain Management Detailed Exam
Constitutional:	General Appearance: well-nourished, well-developed. Level of Distress: mild distress. Ambulation: ambulating normally
Psychiatric:	Insight: good judgement. Mental Status: active and alert, normal mood, normal affect. Orientation: to time, to place, to person. Memory: recent memory normal, remote memory normal
Head:	Head: normocephalic, atraumatic
Lungs:	Respiratory effort: no dyspnea
Musculoskeletal::	Motor Strength and Tone: normal motor strength, normal tone. Joints, Bones, and Muscles: no bony abnormalities, no contractures, no malalignment, limited ROM, tenderness. Extremities: no cyanosis, no varicosities, no palpable cord, edema. Left Shoulder: no objective synovitis, no erythema, no warmth, tenderness, pain on palpation, reduced ROM
Back:	Thoracolumbar Appearance: normal curvature
Lower Extremities:	Right Knee: no crepitus, good ROM, no warmth, no erythema, swelling, tenderness. Left Knee: no crepitus, good ROM, no warmth, no erythema, swelling, tenderness. Right Foot: no warmth
Spine:	Lumbar / Lumbosacral Spine normal lordosis, no spasms, tenderness on palpation, reduced ROM

Reason for Visit

Low back pain

Patient reports to the office today for her follow up visit, she states the pain is in her low back. She

describes the pain as sharp, tight and at times shooting pains, she rates the pain as a 10 out of 10 on the VAS pain scale.

Chief Complaint

Low back pain
Patient reports to the office today for her follow up visit, she states the pain is in her low back. She describes the pain as sharp, tight and at times shooting pains, she rates the pain as a 10 out of 10 on the VAS pain scale.

Instructions

1. Low back pain
- M54.5: Low back pain
- morphine 30 mg immediate release tablet
 - morphine 30 mg immediate release tablet
2. Hip pain
- M25.559: Pain in unspecified hip
3. Lumbar facet joint pain
- M54.5: Low back pain
4. Lumbar radiculopathy
- M54.16: Radiculopathy, lumbar region

Discussion Note

New Lumbar MRI.
Obtain results of MRIs of the knees.
Discussed in detail and counseled patient in regards to the continued need for compliance with recommendations to improve quality of life and reduce pain.

Continue current regimen.

PDMP Reviewed.

History of Present Illness

	Pain Management L-spine
Reported By:	Patient
HPI:	Location: pain is not radiating. Quality: aching. Severity: improving, current pain level 8/10. Duration: constant. Onset/Timing: chronic. Aggravating Factors: standing, walking. Associated Symptoms: no weakness, no numbness, no bladder compromise, no bowel compromise. ADL (Activities of Daily Living): improve with medication, walking. Prior Imaging: no recent studies. Prior EMG: no recent EMG. Previous Surgery none
Notes:	<p>Pt reports recent increase in LBP. She requests a new MRI. She was diagnosed with Plantar fasciitis. </p>

Review of Systems

	Comprehensive General Adult ROS
Reported By:	Patient
Constitutional:	Constitutional: no fever, no night sweats, no significant weight gain, no significant weight loss, no exercise intolerance
Eyes:	Eyes: no dry eyes, no irritation, no vision change
Cardiovascular:	Cardiovascular: no chest pain, no arm pain on exertion, no shortness of breath when walking, no shortness of breath when lying down, no palpitations, no known heart murmur
Respiratory:	Respiratory: no cough, no wheezing, no shortness of breath, no coughing up blood, no sleep apnea
Gastrointestinal:	Gastrointestinal: no abdominal pain, no vomiting, normal appetite, no diarrhea, not vomiting blood, no dyspepsia, no GERD
Musculoskeletal:	Musculoskeletal: no muscle weakness, no back pain, no swelling in the extremities, muscle aches, arthralgias/joint pain
Integumentary:	Skin: ; slight erythema around dorsal great toe incision

Neurologic:	Neurologic: no loss of consciousness, no weakness, no numbness, no seizures, no dizziness, no headaches
Psychiatric:	Psych: depression

Physical Exam

	General Adult Exam, Pain Management Detailed Exam
Constitutional:	General Appearance: well-nourished, well-developed. Level of Distress: mild distress. Ambulation: ambulating normally
Psychiatric:	Insight: good judgement. Mental Status: active and alert, normal mood, normal affect. Orientation: to time, to place, to person. Memory: recent memory normal, remote memory normal
Head:	Head: normocephalic, atraumatic
Lungs:	Respiratory effort: no dyspnea
Musculoskeletal::	Motor Strength and Tone: normal motor strength, normal tone. Joints, Bones, and Muscles: no bony abnormalities, no contractures, no malalignment, limited ROM, tenderness. Extremities: no cyanosis, no varicosities, no palpable cord, edema. Left Shoulder: no objective synovitis, no erythema, no warmth, tenderness, pain on palpation, reduced ROM
Neurologic:	Gait and Station: normal gait. Cranial Nerves: grossly intact. Sensation: grossly intact. Coordination and Cerebellum: no tremor
Back:	Thoracolumbar Appearance: normal curvature
Lower Extremities:	Right Knee: no crepitus, good ROM, no warmth, no erythema, swelling, tenderness. Left Knee: no crepitus, good ROM, no warmth, no erythema, swelling, tenderness. Right Foot: no warmth
Spine:	Lumbar / Lumbosacral Spine normal lordosis, no spasms, tenderness on palpation, reduced ROM

Reason for Visit

low back pain; Bilateral leg pain
Patient came into office today for scheduled follow up visit. Patient states the pain is constant,

stabbing and aching. Pain is worse somedays. Activity increases the pain. Medication is not helping.

Chief Complaint

low back pain; Bilateral leg pain
Patient came into office today for scheduled follow up visit. Patient states the pain is constant, stabbing and aching. Pain is worse somedays. Activity increases the pain. Medication is not helping.

Instructions

1. Low back pain
- M54.5: Low back pain
- back care and preventing injuries: care instructions
 - getting back to normal after low back pain: care instructions
 - learning about relief for back pain
2. Lumbar radiculopathy
- M54.16: Radiculopathy, lumbar region
3. Spinal stenosis of lumbar region
- M48.061: Spinal stenosis, lumbar region without neurogenic claudication
- morphine 30 mg immediate release tablet
 - morphine 30 mg immediate release tablet
 - MS Contin 30 mg tablet,extended release
 - MS Contin 30 mg tablet,extended release
 - lumbar spinal stenosis: care instructions

Discussion Note

The medication management regimen will be augmented with the use of MSContin 30 mg qd. She will use MSIR prn btp.

Assessment

Reason for Visit

low back pain

Patient reports to the office today for her follow up visit, she states the pain is in her low back and

both legs. She describes the pain as stabbing, throbbing, aching and she rates the pain over all a 5 out of 10 on the VAS pain scale.

Chief Complaint

low back pain
Patient reports to the office today for her follow up visit, she states the pain is in her low back and both legs. She describes the pain as stabbing, throbbing, aching and she rates the pain over all a 5 out of 10 on the VAS pain scale.

Instructions

1. Lumbar facet joint pain
- M54.5: Low back pain
2. Lumbar radiculopathy
- M54.16: Radiculopathy, lumbar region
3. Spinal stenosis of lumbar region
- M48.061: Spinal stenosis, lumbar region without neurogenic claudication
- lumbar spinal stenosis: care instructions
4. Low back pain
- M54.5: Low back pain
- MS Contin 30 mg tablet,extended release

• MS Contin 30 mg tablet,extended release

• morphine 30 mg immediate release tablet

• morphine 30 mg immediate release tablet

• back care and preventing injuries: care instructions

• getting back to normal after low back pain: care instructions

• learning about relief for back pain

Discussion Note
She will be continued with the current regimen of MSIR and MSContin. She will return to the office in two months.

Assessment

None recorded.

History of Present Illness

	Pain Management L-spine
Reported By:	Patient
HPI:	Location: pain is not radiating. Quality: aching. Severity: improving, current pain level 3/10. Duration: constant. Onset/Timing: chronic. Aggravating Factors: standing, walking. Associated Symptoms: no weakness, no numbness, no bladder compromise, no bowel compromise. ADL (Activities of Daily Living): improve with medication, walking. Prior Imaging: no recent studies. Prior EMG: no recent EMG. Previous Surgery none
Notes:	<p>She state the pain is much better with the addition of MSContin 30 mg qd. She denies any side effects. </p>

Review of Systems

None recorded.

Physical Exam

	General Adult Exam, Pain Management Detailed Exam
Constitutional:	General Appearance: well-nourished, well-developed. Level of Distress: mild distress. Ambulation: ambulating normally
Psychiatric:	Insight: good judgement. Mental Status: active and alert, normal mood, normal affect. Orientation: to time, to place, to person. Memory: recent memory normal, remote memory normal
Head:	Head: normocephalic, atraumatic

Lungs:	Respiratory effort: no dyspnea
Musculoskeletal::	Motor Strength and Tone: normal motor strength, normal tone. Joints, Bones, and Muscles: no bony abnormalities, no contractures, no malalignment, limited ROM, tenderness. Extremities: no cyanosis, no varicosities, no palpable cord, edema. Left Shoulder: no objective synovitis, no erythema, no warmth, tenderness, pain on palpation, reduced ROM
Neurologic:	Gait and Station: normal gait. Cranial Nerves: grossly intact. Sensation: grossly intact. Coordination and Cerebellum: no tremor
Back:	Thoracolumbar Appearance: normal curvature
Lower Extremities:	Right Knee: no crepitus, good ROM, no warmth, no erythema, swelling, tenderness. Left Knee: no crepitus, good ROM, no warmth, no erythema, swelling, tenderness. Right Foot: no warmth
Spine:	Lumbar / Lumbosacral Spine normal lordosis, no spasms, tenderness on palpation, reduced ROM
